## Precautions

1. Test report is invalid if not affixed with authorized stamp of test or paging seal.
2. The test report is invalid without the corresponding signatures.
3. Test report is invalid only if being supplemented, deleted or altered.
4. Unless otherwise stated, the results shown in this test report are responsible for the delivered sample(s).
5. Objections to the test report must be submitted to CFT within 15 days of report received date.
6. The test applicant is responsible for authenticity of sample information which not subject to verification of CFT.

## Part 1: Sample and Test Information

**Applicant** : Jiangsu Space-O Technology Group Co., Ltd.  
**Address** : No.9 Fukang Road, Xieqiao Town, Jingjiang City, Jiangsu Province 214500, China  
**Sample description** : Oriented Strand Boards (OSB) samples for Type Test in this report were randomly sampled at the facility site by official representative of CFT Corporation in accordance with BS EN 300: 2006 on March 4, 2024. The samples were drawn from 3 production batches. The nominal thickness of OSB is 12 mm. Sampled specimen quantity, specimen specification and specimen source distribution are shown in below Table:

| Sampling Plan                      |            |                                                        |             |                                                                                                                                                                                                                                                                                        |

| General                            |            |                                                        |             |                                                                                                                                                                                                                                                                                        |
| Dimensions                         |            | 2440×1220×12                                           | 10          | Sampled from 3 production batches. Sampling of panels shall be in accordance with EN 326-1.                                                                                                                                                                                            |
| Moisture Content                   |            | 50×50×12                                               | 10          | Sampled from 3 production batches. For each test specimen weighing at least 20 g, and the specimens shall be full thickness of the sheet.                                                                                                                                              |
| Density                            |            | 50×50×12                                               | 10          | Sampled from 3 production batches. Sampling and cutting of the test pieces shall be carried out in accordance with EN 326-1.                                                                                                                                                           |
| Formaldehyde emission              |            | 25×25×12                                               | N.A.        | Sampled from 3 production batches. The test pieces are to be taken evenly distributed, over the width of the board but excluding a 500 mm wide strip at either end of the board. Perforation extraction is repeated for two times, each group is about 110g all thickness test pieces. |
| Mechanical and swelling properties |            |                                                        |             |                                                                                                                                                                                                                                                                                        |
| Bending strength                   | major axis | 290×50×12                                              | 30          | Sampled from 3 production batches. Sampling and cutting of the test pieces shall be carried out according to EN 326-1. The longitudinal sample is consistent as the major axis of the particle.                                                                                        |
|                                    | minor axis | 290×50×12                                              | 30          | Sampled from 3 production batches. Sampling and cutting of the test pieces shall be carried out according to EN 326-1. The transverse sample is consistent as the minor axis of the particle.                                                                                          |

|-------------------------------------|----------|----|------------------------------------------------------------------------------------------------------------------------------------------------|
| Internal bond                       | 50×50×12 | 30 | Sampled from 3 production batches. Sampling and cutting of the test pieces shall be carried out according to EN 326-1.                         |
| Swelling in thickness-24h immersion | 50×50×12 | 30 | Sampled from 3 production batches. Sampling and cutting of the test pieces shall be carried out according to EN 326-1.                         |
| Moisture resistance                 |          |    |                                                                                                                                                |
| Moisture resistance                 | 50×50×12 | 10 | Sampled from 3 production batches. Sampling and cutting of test pieces per panel shall be carried out according to the principles of EN 326-1. |

**Adhesive Information** : The OSB is consist of three layers whose wood direction are perpendicular to each other. The inner layer is made of Polymethylene Polyphenylene Isocyanate wherein phenolic formaldehyde resin face and back layer. Adhesive information is listed in the table below:

| Adhesive Name                          | Type            | Manufacturer                    |
|----------------------------------------|-----------------|---------------------------------|
| Polymethylene Polyphenylene Isocyanate | WANNATE -9132FC | Wanhua Chemical Group Co., Ltd. |
| Phenolic Formaldehyde Resin            | 13M319          | AICA (Guangdong) Co., Ltd.      |

**Manufacturer** : Hubei Baoyuan Wood Industry Co., Ltd.  
**Manufacturer Address** : No.18, Ziling Street, Ziling Town, Dongbao District, Hubei Province, China  
**Country of origin** : P.R.C.  
**CFT Sample No.** : 2024031102B1-B30  
**Sample** : March 11, 2024  
**Received Date**  
**Testing Period** : March 11, 2024 ~ March 29, 2024  
**Test Requested** : Required type test(s) as per BS EN 300: 2006  
**Test Results** : Please refer to next page(s).

## Test Results

### EN 322-1993—Moisture content

Test Method : Reference to section 6 moisture content determination stated in EN 322-1993.

| <u>Test Item(s)</u> | <u>Limit</u> | <u>Unit</u> | <u>Test Results</u> |
|---------------------|--------------|-------------|---------------------|
| Moisture content    | 2~12         | %           | 5.6                 |

Note: The average value is used for the test results.

### EN 323-1993—Tolerance on the mean density

Test Method : Reference to section 6 density determination stated in EN 323-1993.

| <u>Test Item(s)</u>           | <u>Limit</u> | <u>Unit</u> | <u>Test Results</u> |
|-------------------------------|--------------|-------------|---------------------|
| Tolerance on the mean density | ≤15          | %           | 13.6                |

Note: The average value is used for the test results.

### EN 317-1993—24h thickness swelling

Test Method : Reference to section 6 thickness swelling determination stated in EN 317-1993.

| <u>Test Item(s)</u>    | <u>Limit</u> | <u>Unit</u> | <u>Test Results</u> |
|------------------------|--------------|-------------|---------------------|
| 24h Thickness swelling | ≤15          | %           | 14.0                |

Note: The 95% percentile value of single sample shall be calculated according to section 6 in EN 326-1-1994.

### EN 319-1993—Internal bond

Test Method : Reference to section 6 internal bond determination stated in EN 317-1993.

| <u>Test Item(s)</u> | <u>Limit</u> | <u>Unit</u>       | <u>Test Results</u> |
|---------------------|--------------|-------------------|---------------------|
| Internal bond       | ≥0.32        | N/mm <sup>2</sup> | 0.38                |

Note: The lower 5%-quantile value  $L_{q5\%}$  of single sample shall be calculated according to formula (6a) in section 7.3.6 of EN 326-1-1994.

### EN 1087-1-1995—Moisture resistance

Test Method : Reference to section 6 internal bond determination stated in EN 1087-1-1995.

| <u>Test Item(s)</u> | <u>Limit</u> | <u>Unit</u>       | <u>Test Results</u> |
|---------------------|--------------|-------------------|---------------------|
| Moisture resistance | ≥0.13        | N/mm <sup>2</sup> | 0.18                |

Note:

- (1) The lower 5%-quantile value  $L_{q5\%}$  of single sample shall be calculated according to formula (6a) in section 7.3.6 of EN 326-1-1994.
- (2) The test results meet the requirements of option 2 of table 5 in BS EN 300: 2006: internal bond strength after boil test.

## **EN 310-1993—Bending strength、Modulus of elasticity in bending**

Test Method : Reference to section 6 bending strength and bending modulus of elasticity determination (three-point bending) stated in EN 310-1993.

| <u>Test Item(s)</u>                         | <u>Limit</u> | <u>Unit</u>       | <u>Test Results</u> |
|---------------------------------------------|--------------|-------------------|---------------------|
| Bending strength-major axis                 | $\geq 20$    | N/mm <sup>2</sup> | 24.9                |
| Modulus of elasticity in bending-major axis | $\geq 3500$  | N/mm <sup>2</sup> | 4300                |
| Bending strength-minor axis                 | $\geq 10$    | N/mm <sup>2</sup> | 10.2                |
| Modulus of elasticity in bending-minor axis | $\geq 1400$  | N/mm <sup>2</sup> | 1500                |

Note: The lower 5%-quantile value  $L_{q5\%}$  of single sample shall be calculated according to formula (6a) in section 7.3.6 of EN 326-1-1994.

## **BS EN ISO 12460-5-2015—Formaldehyde emission**

Test method: Reference to formaldehyde emission determination stated in BS EN ISO 12460-5-2015.

| <u>Test Item(s)</u>   | <u>Limit</u> | <u>Unit</u> | <u>Test Results</u> | <u>Corrected Value</u> |
|-----------------------|--------------|-------------|---------------------|------------------------|
| Formaldehyde emission | $\leq 8$     | mg/100g     | 0.21                | 0.26                   |

Note:

- (1) The samples are not subjected to conditioning treatment as per request by applicant.
- (2) The formaldehyde emission are adjusted to the standard state value of 4.7% moisture content.

## Appendix I - Test Data

### 1. Moisture Content

| Dimension Specifications<br>(mm) | Sample No. | Initial Mass<br>(g) | Oven-Dried Mass<br>(g) | Moisture Content<br>(%) |
|----------------------------------|------------|---------------------|------------------------|-------------------------|
| 50×50×12                         | 1          | 17.13               | 16.29                  | 5.2%                    |
|                                  | 2          | 18.88               | 17.97                  | 5.1%                    |
|                                  | 3          | 18.82               | 17.24                  | 9.2%                    |
|                                  | 4          | 19.46               | 18.52                  | 5.1%                    |
|                                  | 5          | 18.46               | 17.54                  | 5.2%                    |
|                                  | 6          | 17.37               | 16.47                  | 5.5%                    |
|                                  | 7          | 17.76               | 16.81                  | 5.7%                    |
|                                  | 8          | 17.28               | 16.32                  | 5.9%                    |
|                                  | 9          | 17.80               | 17.04                  | 4.5%                    |
|                                  | 10         | 20.75               | 19.86                  | 4.5%                    |

### 2. Density

| Dimension Specifications<br>(mm) | Sample No. | Length<br>(mm) | Width<br>(mm) | Thickness<br>(mm) | Mass<br>(g) | Density<br>(kg/m³) |
|----------------------------------|------------|----------------|---------------|-------------------|-------------|--------------------|
| 50×50×12                         | 1          | 50.56          | 50.84         | 11.950            | 17.13       | 557.67             |
|                                  | 2          | 50.81          | 50.94         | 11.959            | 18.88       | 609.96             |
|                                  | 3          | 50.89          | 50.51         | 11.957            | 18.82       | 612.33             |
|                                  | 4          | 50.38          | 50.65         | 11.923            | 19.46       | 639.62             |
|                                  | 5          | 50.80          | 50.61         | 11.945            | 18.46       | 601.10             |
|                                  | 6          | 49.77          | 50.89         | 11.949            | 17.37       | 573.94             |
|                                  | 7          | 50.39          | 50.81         | 11.919            | 17.76       | 581.98             |
|                                  | 8          | 50.84          | 50.77         | 12.007            | 17.28       | 557.57             |
|                                  | 9          | 50.93          | 49.77         | 11.925            | 17.80       | 588.87             |
|                                  | 10         | 50.58          | 50.74         | 11.919            | 19.75       | 645.65             |

### 3. Formaldehyde emission

| Sample specifications<br>(mm) | Items                               | Blank test | Sample test |        |
|-------------------------------|-------------------------------------|------------|-------------|--------|
| 25×25×12                      | Absorbance A                        | 0.014      | 0.022       | 0.023  |
|                               | Gradient of the calibration curve   | 12.8312    |             |        |
|                               | Mass of test pieces (g)             | 111.39     |             | 110.28 |
|                               | Moisture content (%)                | 4.67       |             |        |
|                               | Perforator value (mg/100g)          | 0.19       |             | 0.22   |
|                               | Average perforation value (mg/100g) | 0.21       |             |        |
|                               | Moisture content factor F           | 1.24       |             |        |
|                               | Corrected perforation value         | 0.26       |             |        |
